## About me

-----

I'm a positive and proactive agile enthusiast with a passion for OO design. Being a full-stack developer, last years I mostly work with front-end. Architecture? Modularization? I18n? User roles and UI components security? Theming? Caching? Crossbrowser compatibility? UI tests automation? Continuous integration? Reusability? Framework upgrade? I feel your pain.

I can help and you will be very happy with how much I contribute.
